

# City of Solvang

Solvang, California

---

Dear Customers,

California State Water will be conducting a brief maintenance shutdown from **Friday, October 24, 2025, to Monday, November 10, 2025**. The City of Solvang typically operates with an 80% State Water / 20% well water blend during routine operations. During this shutdown, you may notice a slight change in water quality. State Water is typically softer; therefore, hardness will increase slightly while the City converts to **100% well water**.

The Water Division will also complete the required chemical disinfection conversion during this period. You may see Water staff flushing at various points within the system—a standard process to clean the water system—which should last only a few days. Please be assured that throughout this shutdown, Solvang's water quality will be well maintained and will meet all State health requirements.

We also ask residents to help conserve water during this time by keeping usage to a minimum.
